

RULE 13

OVERTAKING

An overtaking vessel is one coming from more than 22.5° abaft the beam (within the arc of the stern light).

If you can see only the stern light at night, you are overtaking.

If the vessel being overtaken alters course, it does NOT become a crossing situation. The overtaking vessel should still keep clear!

"Notwithstanding anything contained in the Rules of Part B, Sections I and II, any vessel overtaking any other shall keep out of the way of the vessel being overtaken."
